

LIST OF FIGURES

1. Photon scattering in individual images, as function of wavelength.
2. Example of PSFs generated from Feb 1997 SLF test data.
3. Background image showing diagonal streaking from electronic noise.
4. Typical 1-sec (left) and 60-sec (right) background images.
5. “Carpet plot” representation of Fig 4.
6. Background ROI and image ROI.
7. Computed centroids relative to pixel pattern for several data sets.
8. Estimated uncertainties in PSF distribution, in log-lin and log-log formats.
9. Primary PSF binned data and piece-wise fits.
10. Encircled energy for fits of Fig. 9, linear and semi-log.
11. Measures of systematic noise in background correction.
12. Correlation between fit parameters A and r_0 .
13. Fine-scan test centroid locations.
14. Variation of fit parameters across pixel pattern in fine-scan test.
15. PSF sector map.
16. Summary of sectorized PSF fit parameter variation, as function of field angle (Al source).
17. Summary of sectorized PSF fit parameter variation, as function of field angle (C source).
18. Halo visible in raw images, XRCF tests (left) and SLF tests (right).
19. Halo from composite of two XRCF images, background subtracted.
20. Halo from superposition of 85 Al source PSF images, on axis (left) and 10arcmin offset (right).
21. Fit to bloomed composite image showing visible halo (left) and scaled fit to same data, using 873V PSF fit parameters as basis.
22. Halo images from which Moffit core has been subtracted, to isolate halo contribution.
23. Composite image from which Moffit core has been subtracted, for several grey-scale settings.
24. C source PSF data, voltage series, 699V.
25. C source PSF data, voltage series, 747V.
26. C source PSF data, voltage series, 828V.
27. Core fit parameters as function of wavelength and MCP voltage, from sensitivity series.
28. Boxes used in direct counting analyses, overlaid upon halo image.
29. Relation between direct counting and PSF-fit estimates of effective area.
30. Focus map, C source, showing 25% and 40% encircled energy contours.
31. Filter set data.
32. Resolution test representation.
